

BMPRO CONNECT

QUICK START GUIDE

CONTROL YOUR RV FROM YOUR SMARTPHONE OR ONBOARD TOUCHSCREEN

The BMPRO CONNECT system puts control of your entire RV at your fingertips. BMPRO CONNECT is comprised of two components.

The Controller: A touch-screen interface, which sends commands.

The Node: The motherboard, which receives commands and performs functions. The Controller communicates with the Node through the BMPRO CONNECT app. We expect the system to be powered with a minimum of 12.6 volts.

It is important before getting started to make sure your system is fully updated. BMPRO regularly adds improvements and features in conjunction with your RV manufacturer.

Updates are performed by simply updating the BMPRO CONNECT app on the Controller.

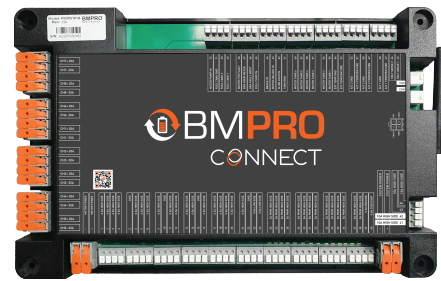

The BMPRO CONNECT system controls the RV through two methods:

1. The app on the Controller or your smartphone sends commands to the Node using Bluetooth.
2. The redundancy keys below the Controller touch screen can be used to send pairing commands, and allows for basic control of lights, awnings, and slides.

Tap on the Controller screen to wake it. Open the BMPRO CONNECT app to view the Home screen. This displays quick access to climate control, lights, and tanks. There is a menu bar along the left side that allows for access to specific areas of the app such as tanks, motors, climate, lighting, sensors, and energy. Tap the icons to monitor and control these areas.

CONTROLLER

NODE

FAQs

The Controller is asking me to pair devices, what do I do?

This means the Controller is not paired to the node. To pair the Controller to the Node, follow the pairing procedure on the screen.

The Controller screen is inoperable, I can't access my RV's features, now what?

Using the redundant keys below the screen and the app installed on a mobile device, you will have full control of the RV's features.

The Controller screen is flashing BMPRO repeatedly or stays dark, how can I fix this?

We recommend plugging the RV into shore power for a few hours to allow the controller to charge. In the meantime, use the mobile app to control the RV.
