HELP GUIDE

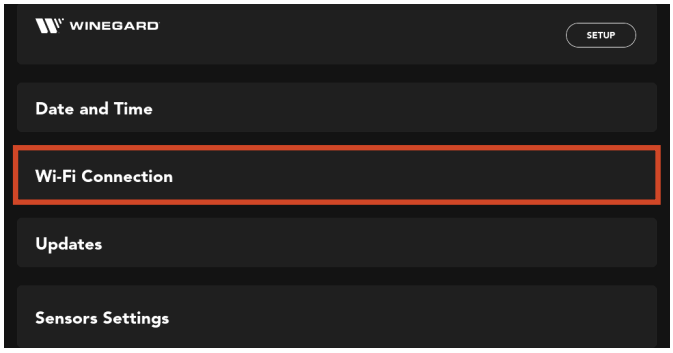
CONNECTING YOUR CONTROLLER TO WI-FI

To allow over-the-air updates to your Controller and system, as well as remote control of your system via the BMPRO Cloud platform, your Controller will need to be connected to Wi-Fi.

Wi-Fi connection is only available on RVs equipped with a Controller.

To connect to a Wi-Fi network:

1. On the Controller, in the page navigation sidebar, at the bottom, select the settings icon.
2. Scroll down and press **Wi-Fi Connection.**



3. At the top of the screen, ensure "Enable / Disable Wi-Fi" is set to **ON**.
4. From the list of available networks, select the name of the Wi-Fi network you want to connect to.
5. Press **Join**.
6. In the pop-up screen, enter your Wi-Fi password.
7. Press **Connect**.

You should now be connected to your Wi-Fi network.

For earlier versions of the Controller, if the Wi-Fi network password has been changed, you may unable to update it on the Controller. To reconnect to the network, update the SSID or network name.

For information on how to do this, contact your internet provider.
