

INSTALLING SOLAR WITH A BATTERYPLUS35-II

When installing a solar connection to a BM PRO BatteryPlus35, it is crucial that the connections are suitable to handle the anticipated solar currents.

Please refer to the BatteryPlus35 owner's manual for the correct specification for your power management system solar input.

BM PRO recommends that any solar installations exceeding 350W panels - including any portable panels which are likely to be installed - should utilise both solar input connection points to ensure adequate electrical connection at the solar input.
